Learning objectives:

The **impact**, **advantages** and **disadvantages** of the **effects of technological changes on society** in relation to product manufacture.

Mass production

- **Consumer society including built in obsolescence**

planned obsolescence

Briefly explain the phrase built in obsolescence

……

……

What are the advantages of built in obsolescence?

……

……

……

What are the disadvantages of built in obsolescence?

……

……

……

Can built in obsolescence be overcome completely, or will there always be an element of this in product design?

……

……

……

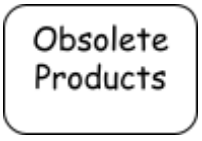

Can you think of any products, which are immune from built in obsolescence?

……

……

……

Using the space below, mind map as many products that you can think of that will be obsolete due to changes in technology in the next 10 years.

What is the link between built in obsolescence and sustainability issues?

……
……
……

How does built in obsolescence affect your project design?

……
……
……

- **Employment**

Using the space below, mind map as many job roles as possible linked with mass production.
Hint: Think beyond factory based roles.

What is the positive impact of mass production on employment?

……
……
……

What is the negative impact of mass production on employment?

……
……
……

'New' industrial age of high tech production

- Computers in the development and manufacture of products
- Miniaturisation of products and components
- Use of smart materials and products for innovative applications

Global Marketplace

- Multinational companies in developed countries manufacturing 'offshore' in developing countries
- Local and global production

planned obsolescence
