

Streamlining

Raymond Loewy

1930 - 1940

https://www.youtube.com/watch?v=_52-EWUASFo

ACTIVITY 1 - Starter: Record your thoughts… **SEE, THINK, WONDER**

"What is the first word that comes to mind when you see this? What design choices make you feel that way?"

Record your thoughts… **SEE, THINK, WONDER**

Task

Select two objects you find visually compelling and record your initial observations and interpretations on the shared worksheet.

Identify at least three design features for each object and propose a hypothesis about its function.

Key Principles of Streamlining

Key principles of streamlining movement include aerodynamic shapes like the teardrop to minimize fluid resistance, simplified forms with smooth surfaces and rounded edges to create a sense of speed, emphasis on functionality and efficiency in design, and the use of sleek, often industrial materials such as metal and glass. The overall goal is to create a faster, more efficient, and aesthetically pleasing object by capturing the feeling of modernity and the machine age.

Key Principles https://www.youtube.com/watch?v=0xLlAVG4e-M

Aerodynamic Forms

- **Teardrop Shape:** The "teardrop" shape is an optimal aerodynamic form that allows fluids (like air or water) to flow smoothly around the object with minimal resistance.
- **Curved Surfaces:** Smooth, curved surfaces help to reduce drag, making objects faster and more efficient.

Simplified Aesthetics

- **Clean Lines:** Streamlined designs feature clean, geometric lines and simple forms.
- **Minimal Ornamentation:**Excess ornamentation is removed to focus on the beauty of pure form and function, creating an understated elegance.
- **Horizontal Emphasis:** A characteristic of the Streamline Moderne style, designs often incorporate a strong horizontal orientation and lines.

Key Principles on Streamlining ... continued

Focus on Functionality

- **Efficiency:** Streamlined designs are optimized for practical and everyday use, emphasizing efficiency.
- **Industrial Integration:** Designers incorporated functional elements such as storage and ergonomic considerations into the overall streamlined form.

Materials and the Machine Age

- **Industrial Materials:** The use of materials like glass, metal, and plywood was favored for their ability to achieve sleek, lightweight designs.
- **Symbol of Modernity:** Streamlined forms, with their connection to speed and efficiency, became powerful symbols of the modern industrial age and technological progress.

ACTIVITY 2

Born - 1893 - 1986

Raymond Loewy: The principles that shaped modern product design.

Raymond Loewy, often called the **"Father of Industrial Design,"** revolutionized the way we think about product aesthetics, usability, and customer obsession?

https://www.youtube.com/watch?v=F-wvjmeO8_4

TASK: *Using the website link and youtube clip -* ***make notes on Raymond Loewy's*** *achievements.*

Website link:

Activity 3: The Independent Designer's Judgement

Write a **well-reasoned paragraph** arguing for or against it, citing at least **two specific examples from Raymond Loewy's work**.

"The Streamlining movement was primarily a marketing tool to make products appear modern, with its aesthetic value far outweighing its functional improvements"

Timed: 15 minutes
