Permanently Joining Materials - Adhesives

Aim:

Investigate the use of ***'adehesives'*** to ***permanently*** join materials.

Research

Task:

1. Create a Google Slides document.
2. Research the following adhesives:
   - *Contact Adhesive*
   - *Acrylic Cement*
   - *Epoxy Resin*
   - *Polyvinyl Acetate (PVA)*
   - *Hot Melt Glue,*
   - *Cyanoacrylate (Superglue)*
   - *Polystyrene Cement*
3. Produce ***one*** slide per method including 'diagrams' which explains the joining processes.
4. Your slides should have headings and subheadings. Including the following information:
   - *Explain the joining process - How would you join material using this method?*
   - *What equipment is required?*
   - *What materials can be joined using this method - applications?*
   - *What are the advantages / disadvantages of using this method?*
   - *What health and safety criteria need to be met?*
5. Attach your work to Google Classroom

Contact Adhesive:

Acrylic Cement:

Epoxy Resin:

Polyvinyl Acetate (PVA):

Hot Melt Glue:

Cyanoacrylate (Superglue):

Polystyrene Cement:
