Homework: 3.4(d) Jointing - traditional wood Joints

3 Processes, techniques and specialist tools

3.4 Uses, characteristics, advantages and disadvantages of the following permanent and semi-permanent joining techniques in order to discriminate between them, select appropriately and use safely:

*d) jointing – **traditional wood joints**, knock-down fittings (including use of specialist tools).*

Research

Using ***written answers*** and ***labelled diagrams / images*** research the ***'wood joints'*** listed below. Explain:

1. *How they would be marked out - including what marking out tools would be used.*
2. *How they would be cut / formed.*
3. *Where the wood joints would be used - provide examples of products.*
4. *What are the advantages / disadvantages of each wood joint.*

Wood Joints:

1. *Butt Joint*
2. *Lapped joint (sometimes referred to has half lapped joint or shoulder / rebate joint)*
3. *Housing joint*
4. *Mortise and tenon joint*
5. *Comb / Finger joint*
6. *Mitre joint*
7. *Dowel joint*
8. *Biscuit joint*
